

# UK policy for the environment

Center Parcs recognises all its activities have an impact on the environment. This happens through its day-to-day operations; the development of Villages, and its influence in the wider community.

Fulfilling this Policy will embrace the core business value of creating an exceptional experience for our guests.

## Commitments

The Environmental Management System will support the commitments to:

- continually improve its activities in order to reduce its environmental impacts as far as commercially viable;
- review the company's environmental objectives and targets annually;
- prevent pollution, and
- comply with all relevant environmental legislation and other requirements.

## Biodiversity

The diversity of life on our villages is fundamental to the experience we offer our guests. We are committed to protecting the wildlife on our villages and to enhancing their habitat.

## Carbon Reduction

Center Parcs has a responsibility to manage its impact on climate change. It is committed to work in ways that minimise carbon emissions and to reduce the company's carbon footprint. The company will achieve this by monitoring energy usage and carbon emissions, in addition to building energy efficiency into its designs and investing in appropriate technologies. Center Parcs will also pro-actively participate in the Carbon Reduction Commitment Energy Efficiency Scheme.

## Natural Resources

Center Parcs is committed to reducing, as far as reasonably practicable, its use of natural resources and the volume of waste it produces. Staff are empowered to manage the company's activities to lower the environment impact. Center Parcs will recycle as much as it is economically viable to do so.

## Guests

Center Parcs will ensure that guests enjoy their short break holiday in the knowledge that the company is managing its business in harmony with the environment. It will continue to develop Guests' understanding of environmental issues.
